2004 Ford Expedition Performance Air Suspension—GARiD.com
The component charged with carrying all that weight is the air suspension. Weighing in at just under 6,000 pounds, just keeping the Expedition off the ground is a monumental task. Add to that a few people and cargo and you are really asking a lot of your suspension to begin with. The OEM air suspension in your car supports all this weight by using rubber air bags attached to the struts as opposed to mechanical coils.

2004 Ford Expedition 5.4L, Air Suspension Relay, where is it
The Expedition has an air suspension system that replaces the traditional spring suspension in vehicles. The air suspensions system is controlled by the engine and deflates when the car is turned off. If the car is left unused for an extended period of time, it deflates the suspension and lowers the vehicle to the ground.
